

SafeHous

INDUSTRIAL GRADE LEAK DETECTION SYSTEMS

SafeHous Internet Gateway Hub Central Communication Hub for FS360 Devices Model: IGW-10000

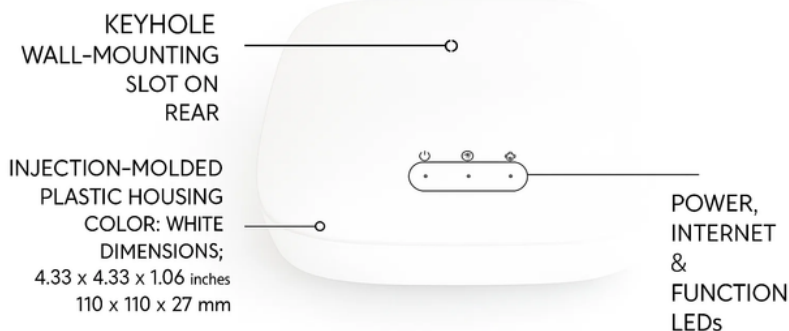

Product Description

Your version is already solid, but it can be tightened and made slightly more product-grade. Here is a cleaner version: The SafeHous Internet Gateway Hub serves as the central communication point for the SafeHous leak detection ecosystem. It connects all SafeHous devices—including leak sensors and automated shut-off valves—into a single, unified network.

Using secure, long-range LoRa wireless technology, each device communicates directly with the gateway. The gateway then transmits real-time alerts, device status updates, and control commands to the SafeHous App, providing users with complete visibility and control from anywhere in the world.

Specifications

- Power: USB Micro-C
- (120V Plug-In Power Supply Included)
- Frequency: 923.3 MHz
- Fully-Encrypted
- Supports 300+ Devices
 - 1/4 Mile Range, Open-Air
